

Noise and Hearing

Noise damage to hearing health is a health risk which is associated with both civilian and military occupations as well as certain leisure activities. Occupational noise damage to hearing must date from the bronze age, when man first began to fashion metals some five thousand years ago. The rapid growth of industrialisation over the past two centuries has produced what might be termed as the current civilian epidemic of occupational noise induced hearing loss. This series seeks to address points relevant to current knowledge of the subject. The volume should prove useful to members of the many disciplines that have an interest in this subject.

Of the roughly 40 million Americans suffering from hearing loss, 10 million can be attributed to noise-induced hearing loss (NIHL). NIHL can be caused by a Millions of Americans are exposed to noise pollution every day that causes hearing loss and a host of other health conditions. Find out how to Noise-induced hearing loss limits your ability to hear high frequency sounds and understand speech, which seriously impairs your ability to communicate. Noise pollution isnt good. It interferes with our ability to hear sounds of higher quality, though quality is in the ear of the beholder. Listening to A self-administered questionnaire regarding hearing, the amount of leisure noise exposure and attitudes towards noise and hearing protection as well as an High Blood Pressure, Cholesterol Associated With Noisy Jobs. Hearing Loss Linked With More Accidental Injuries. Spoken Speech and ASL Appear to Engage NIHL can also be caused by extremely loud bursts of sound, such as gunshots or explosions, which can rupture the eardrum or damage the bones in the middle ear.
